Walmart collector, release 1.6.8: summary

Store: Walmart #3891, 3900 Fountain Square Pl, Waukegan, IL 60085, fulfillment PICKUP. Collector release 1.6.8 (commit `85c29e7`, 2026-11-05T20:51:52Z) and the shared Classic probe 1.7.2 (commit `7768514`), published under the tag `review-1.6.8-20261106` (prepared by Hamza on 2026-11-05 and 2026-11-06, UTC).

How to read the evidence. OFFLINE: tests on fixture or stored pages, no request. OWNER AZURE: Hamza's own Azure test VM (Linux), no provider request; it is not the client's environment. LIVE: earlier runs against Walmart through the Oxylabs Web API on the owner's free trial credit. **No live run was made on 1.6.7 or 1.6.8**, and nothing ran in the client's environment.

What 1.6.8 corrects

Finding of the review of 1.6.6	Correction	Shown by
C4: a body shorter than its declared length was taken as complete (probe 1.7.1)	probe 1.7.2 keeps it as partial, with its declared and received lengths and its hash; it is never parsed and its money stays held	the review's tests fail on 1.7.1 (13 on Windows, 14 on Linux) and pass on 1.7.2
C2: a manifest read past the hard deadline; an earlier campaign's evidence accepted	evidence only from a bounded regular file that names the current execution; the session's process tree is ended whole; the supervisor returns within its hard end plus 0.5 s	the same tests, among them an immediate restart in the same folder
The Linux drip test expected a forced kill	it asserts the deadline, the outcome and the worker's end; a separate test forces a hung worker and checks a real kill and reap	probe 1.7.2 from its archive on Linux: 201 passed, 3 skipped, 0 failed
Completeness was called too early	a partition is complete only through its children; a row read in part is never complete; a filtered view never completes a listing; a category page of its own is read for the listings it names	the new tests fail on the code before them (1.6.6, 1.6.7 and two earlier 1.6.8 candidates); the controls beside them pass
"Fabric Softener" against "Fabric Softeners"	a record takes the name the row's category page gives its exact view, on fresh and carried records	the L12 replay renames 52 records, 40 of them L12's own fresh records
A size conflict withheld a verified UPC	UPC and size are decided apart	the 3 UPCs it withheld are filled from saved reads, with no request

The 275 sponsored and variant decisions, row by row: 48 included; 165 excluded because the item's own page places it in another category; 4 because the page states no category path, so the category cannot be proven; 55 for no proof of local eligibility; 3 duplicates, linked to their original observations. None failed, was blocked or is unresolved. The queue of UPCs with no read is 44 (not the 45 reported for 1.6.6).

Where it was verified

What	Where	Result
The whole suite on the commit	OWNER AZURE, Linux	unit 554, integration 222 in 23 files, all passed
Both editions from their ZIPs: lock, lint, types, migrations on PostgreSQL 16, the whole suites, the operator drill, rollback to 1.6.6 and forward again	OWNER AZURE, Linux	44 steps, 0 not as expected
Docker: both images built from the ZIPs; smoke tests; replays of stored live pages; a replay killed and resumed; rollback; data across a daemon restart	OWNER AZURE, Linux	89 steps; 1 not as expected by its exit code (the gate's databases were still present; dropped afterwards). The resumed replay's export equals the uninterrupted one byte for byte
Both editions from a clean extraction of the source ZIP	OFFLINE, Windows	37 steps, 0 not ok: unit 554 per edition and the integration files the change touches (Oxylabs 151, Scrape.do 73); the Azure templates build and lint, nothing deployed

A refused automatic publication	OFFLINE and OWNER AZURE	`PUBLICATION_REFUSED` at ERROR, exit 6, on the first attempt and on Azure's retry (tests); in the drill, exit 6 and again exit 6 on a manual publish; the last-good dataset unchanged
The walkthrough	OWNER AZURE	a 163 s screen recording with its English narration on screen, on stored pages only
A replay of L10 (stored pages), timed and its memory measured	OWNER AZURE, Linux host	424 pages in 511.5 s, one worker in one process, resident memory at most 1.38 GiB; a replay, not a live measurement

Coverage today, row by row

The 11 rows of the client's CSV name 1,104 known listings. Under the 1.6.8 rules: 252 complete, 213 partial, 464 not attempted, 15 incomplete (a moving total or a missing page), 12 stopped at the site's result window, 7 read only through a filtered view, 95 category pages of their own not read yet, 1 category page and 1 not found; 44 are out of scope. **No CSV row is complete (0 of 11).**

CSV row	Listings known	Complete	Partial	Not attempted	Other open	Out of scope	Row complete
Food	215	7	29	124	50	5	no
Household Essentials	114	19	14	65	13	3	no
Personal Care	123	46	53	1	16	7	no
Beauty	123	44	42	10	25	2	no
Diapering	1	0	1	0	0	0	no
Feeding	127	72	37	7	10	1	no
Health & Wellness	11	2	3	0	6	0	no
Pets	87	43	25	1	9	9	no
Balloons	1	0	1	0	0	0	no
Art Supplies	8	2	6	0	0	0	no
Office Supplies	294	17	2	256	2	17	no

The last live runs: L12 on 1.6.6 (detail on) proves 40 fresh products and 10 product pages; its 10,301 exported records include 10,261 carried. L10 on 1.6.4 read 7,055 fresh valid products with detail off. L8 on 1.6.3 read 675 with detail on.

Money

The live runs used the owner's Oxylabs free trial credit, counted at the documented rate of USD 0.0015 per result. The trial is USD 5 in total, shared with the Mariano's project. Walmart's envelope of USD 2.25 has USD 2.247 committed and USD 0.003 left. The Oxylabs ceiling is 0 since 2026-11-04. Mariano's unspent envelope is not moved to Walmart without the owner's written authorization.

Next work	Size	Cost at that rate
500 or more fresh products in one run, detail on, on 1.6.8	at most 45 submissions, retries included	at most USD 0.0675
The known listing pages left	about 3,059 pages	about USD 4.63
The category pages not read yet	95 pages	USD 0.14
The listings those pages name	not known until read	USD 3.95 to 23.72, if each page names 5 to 30
Pages beyond the result window	1,657 pages, 1,475 of them one listing	USD 2.49
Product pages of the products known today	9,307 pages	USD 13.96
Product pages of products not yet seen	50,321 to 101,956 pages (estimate)	USD 75.48 to 152.93
Retries of product pages (1.6% measured)		USD 1.47 to 2.74

What is pending, and on whom

Item	State	What it needs
The 500-product demonstration on 1.6.8	BLOCKED_BUDGET	a written ceiling of 45 submissions and USD 0.0675 on an account the owner or the client names
The full catalogue and a timed full run	BLOCKED_BUDGET	funding of the continuation, on the account the client chooses
A run in the client's Azure environment, observed by the client	PENDING_CLIENT_AZURE	the access window, the VM restarted, the new public key installed and the old one revoked
Two scheduled runs, Tuesday and Friday at 06:00 Chicago	PENDING_OBSERVATION	the client's approval to enable the schedule, and funds for the runs
A real product going unavailable, or missing later, between two runs	PENDING_OBSERVATION	live runs that observe one; none is manufactured (the retention rules are tested offline)
Deallocate the owner's test VM; read the provider's usage page; replace the owner's Web API key	PENDING_OWNER	Hamza, in his Azure portal and his Oxylabs dashboard
Classic live mode; Scrape.do	PENDING_CLIENT_DECISION	the client's choice, entitlement and access
The support period and the transfer of intellectual property	PENDING_CLIENT_DECISION	an agreement between the owner and the client

The acceptance matrix's 206 rows on 1.6.8: PASS_OFFLINE 91, PASS_DEVELOPER_LIVE 66, BLOCKED_BUDGET 22, NOT_APPLICABLE_BY_CLARIFICATION 6, PASS_OWNER_AZURE 5, PENDING_CLIENT_AZURE 5, PENDING_CLIENT_DECISION 4, PENDING_OWNER 4, PENDING_OBSERVATION 3.
